DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/19/2007 has been entered.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 6/19/2007 has been considered by the examiner.

Election/Restrictions

Applicant's election of group II comprising claims 12 – 28 in the reply filed on 8/22/2006 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Claims 1 – 11 and 29 – 31 are canceled.

Terminal Disclaimer

The terminal disclaimer filed on 1/18/2007 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of copending application no. 09/980,661 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

Claims 12 – 28 are allowed.

The following is an examiner's statement of reasons for allowance:

Fuller et al. (U.S. Pat. No. 5,792,668 A) teach a glucose concentration detection system where the specimen (e.g., a finger 4) is in direct electrical contact with probe 6 (see ,e.g., col. 4, line 64 – col. 5, line 10).

Elden et al. (U.S. Pat. No.6,517,482 B1) teach a glucose monitoring and control device and associated insulin pump means, wherein the electrodes of the device are placed in conductive contact with the test subject during use (see, e.g., col. 3, lines 16 – 67; col. 8, lines 31 – 61).

Regarding claim 12, the cited prior art neither teaches nor fairly suggests a method for managing a process involving a specimen comprising the steps of: arranging a single first electrode with the specimen, wherein the first electrode is electrically insulated from the specimen; and using a modulated electrical voltage signal at the first electrode to generate a modulated field in the specimen for measuring and controlling at least one parameter, such as glucose concentration.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
